

Requires SC-500
or larger parts set.

Playback to Radio:

Tune your AM radio to a frequency where no one is transmitting. The microphone is on jump wires so it is easier to record your message. Turn switch (S1) on and you'll have 8 seconds to record your message then turn off the switch. To play it back, hold your project next to the radio and press the switch (S2). The variable capacitor allows you to fine tune the signal. You will hear your message on the radio followed by one of 3 songs. To hear the other songs, press the switch (S2).
