

 **WARNING:** Moving parts. Do not touch the motor during operation.

Buzzing Bee

Leave the fan off the motor. BE CAREFUL NOT TO TOUCH THE MOTOR WHILE IT SPINS.

This circuit makes a sound like a bee and (with some imagination) it looks like one too. I came up with this idea when I was watching the carpenter bees. The buzzing bee is also an anti rodent device.

This is the same as project #2, but without the fan.

This circuit was created by Caroline from Georgia.
